

“Stay So Clean”, Glass Protection.

Your door is coated with water and oil repellent coating. It does not need cleaning with any soap or chemicals. In fact cleaning products may harm the coating. A clear water rinse and squeegee dry is all that is needed. You can buff with a bath towel when you want to be “spot free”. If the glass does not feel slick or if anything is sticking that won't buff off with a towel, call us for a touch up. Touch ups are included with an annual application.

We expect you will need a second coating with in the first year to get a full effect. So don't be shy about calling us. We want your glass to stay nice and clear for a long, long time.

This super hydrophobic coating fills in the microscopic pores in glass and creates a chemical bond at the molecular level. You can actually feel it on treated glass. The resulting barrier is so smooth and slick that soap scum and hard water minerals cannot penetrate it. Water beads up and falls off the glass, taking the soap, dirt and minerals with it.

Stay So Cleans function can be compared to non-stick cookware. The surface can still get dirty, but cleaning is much easier. This means keeping the shower glass free of unsightly stains will be easier. No more hassle and hard work. Some brands of glass protection products require you to use special cleaning products every week to ‘keep up the protection’. Who has time for that? You are busy and really don't need that on your To Do list.

Please keep in mind that cleaners which contain vinegar, ammonia, bleach or acidic chemicals should never be used. Not only will they remove the Stay-So-Clean coating, they could damage your metal finish. Abrasive cleaners and scouring pads should be avoided as they too can damage the metal and glass components. Many leave-on, misting cleaners can damage polymer parts on your enclosure and should also be avoided. With Stay So Clean, we do all the work for you.

We clean the glass and apply the treatment for you. We are local and can keep it working to your advantage indefinitely. We guarantee it to keep working for at least a year. Need a retreatment? It's free!

Concerned about the environment? Stay So Clean is an eco-friendly product free of caustic chemicals and carcinogens.

Stay So Clean will keep your shower glass looking new for years to come.

Stay So Clean treatment is also available for existing glass enclosures. See an associate for details.
